

REAC 1

Research Enterprise and Commercialization 1

Overview

REAC 1 was created by the UND Research Foundation (UNDRF) to advance the research agenda of the University of North (UND): to commercialize its university innovations and discoveries, to create economic opportunities for Grand Forks and North Dakota, and to build strategic partnerships between the university and private companies.

The REAC 1 is the only building in the state that features all of the cutting edge technology listed below. It works to provide tenants with a place to continue their high-tech research, development, and growth.
